

# Got Corrosion?

In the real-world of sanitary and high-purity processing industries, corrosion and rouge have plagued manufacturers from the start. For many years austenitic stainless steels have been used successfully to combat these issues. However, as more aggressive environments have emerged and solutions with higher chloride content have been introduced, the stainless steels in use today are not always adequate in offering safe corrosion resistant process piping and equipment for the manufacture of pharmaceutical, personal care, and food products. VNE has a long history of providing solutions for our customers.
